

CIR 864 PROJECT OF THESIS I

Workload: 60h

Credits: 04

Nature: Mandatory PhD

Professor: Ivana Duval de Araújo

Discipline Syllabus: The skills for PhD students include preparing for research as well as training of human resources. In this context, the critical evaluation of research projects, with a discussion based on research methodology, biostatistics, bioethics and scientific writing, can bring together basic knowledge of scientific research, applying them to its own ongoing and the future projects. In addition, the students can exercise their argumentative capacity and, eventually, correct deviations or add new variables in their research project, aiming at reducing failures and ensuring the accomplishment of studies with better scientific quality. Upon enrollment in the course, the student must submit the thesis project, which will be evaluated by two referees. The Master degree student should present the project in 20 minutes, followed by a discussion of each PhD student's report (20 minutes) and the opinion of the other students (20 minutes). All the students enrolled in the doctorate must attend the course until the second year of the doctorate.
